

Installation Instructions for EZ-Xtend Boat Zippers

Special Pre-installation Note: If you have a zipper pull that you can't back up because of separated teeth, don't force it backwards. Slide the pull down to the bottom and cut a small slit between the last two teeth and slide your pull off the zipper from the bottom, separating the rest of the teeth with your hand. Then you can begin your EZ-Xtend Boat Zipper installation.

- 1. Unzip and lay aside clear panel where the EZ-Zipper is to be installed.**
- 2. Lightly run a tube of chap stick across the old zipper teeth, this will help the new zipper and old zipper join together. Don't overdo it.**
- 3. Zip in your new EZ-Xtend Boat Zipper. Cut EZ-zipper to length.**
- 4. Wrap the end with no-fray tape.**
- 5. Crimp the stainless steel zipper stop onto the last tooth on the slider side of the zipper only (a pair of pliers will work for this). Keep the extra zipper stop in case you lose, drop or need another zipper stop somewhere else on the boat.**
- 6. Zip the clear enclosure panel back in place and snap.**

Thank you for using EZ-Xtend Boat Products!
